DETAILED ACTION

Reasons for Allowance

The claims are statutory because Applicant specifically recited on page 4, lines 10-20 and page 5, line 1 of the Specification the following:

Intelligent user interface agents are **costly** to develop and consume system resources when used. Inappropriate application of intelligent agents wastes both development and execution resources. In addition, inappropriate application may hinder rather than enhance the user interface by getting in the way of task performance where the user knows how to perform the task or by providing insufficient direction to complete the task successfully. Thus, the technical problem exists of determining the optimal assignment of intelligent agents to human-computer interaction tasks so that tasks provided with agents need them and the appropriate class of agent is assigned to those tasks.

Therefore, to the extent that the practical application is to reduce costs measurable in discrete dollar values, the claims are statutory.

Claims 1-9 are allowed.

The following is an Examiner's statement of reasons for allowance: Claims 1-9 are considered allowable since when reading the claims in light of the specification, as per MPEP §2111.01, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 1, including: "user assessment variables" (as defined at page 5, lines 10 through 18 and at page 9,

lines 7 through 19 and at page 10, lines 1 through 15), "at least as many clusters of tasks as there are intelligent agents to assign" (as defined at page 4, lines 5 through 20 and at page 5, lines 1 through 18 and at page 11, lines 1 through 20), a "display of agent associated with a cluster" (as defined at page 7, lines 4 through 14).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 5, including: "user assessment variables" (as defined at page 5, lines 10 through 18 and at page 9, lines 7 through 19 and at page 10, lines 1 through 15), "at least as many clusters of tasks as there are intelligent agents to assign" (as defined at page 4, lines 5 through 20 and at page 5, lines 1 through 18 and at page 11, lines 1 through 20), a "display of agent associated with a cluster" (as defined at page 7, lines 4 through 14).

Further, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 8, including: "user assessment variables" (as defined at page 5, lines 10 through 18 and at page 9, lines 7 through 19 and at page 10, lines 1 through 15), "at least as many clusters of tasks as there are intelligent agents to assign" (as defined at page 4, lines 5 through 20 and at page 5, lines 1 through 18 and at page 11, lines 1 through 20), a "display of agent associated with a cluster" (as defined at page 7, lines 4 through 14).

Only to the extent that these features are not found in the prior art of record is the present case allowable over the prior art.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure. Specifically:

- A. Bonnell et al. (U.S. Patent Number 5,655,081) discloses a system for monitoring and managing computer resources and applications across a distributed computing environment using an intelligent autonomous agent architecture.
- B. Burt et al. (U.S. Patent Number 5,682,482) discloses a system for facilitating the supplying of services in a network.
- C. Carney (U.S. Patent Number 5,784,452) discloses a telephony call center with agent work groups.
